statewide in Illinois

What does

This small (3.25-4.1) of the plastron is much shorter than the mouth, pair of chin barbels. The carapace may be 1

What are it

The stinkpot is aquatic water bodies. Its name comes from its glands. This ill-tempered animal is a mollusk.

What about

Eggs are laid in June in a pond. The clutch of 3-5 hard-shelled eggs hatches in early fall.

Read & Color

Now that you have learned more about the stinkpot, add some of its habitat, too.
