EarthWorks is an experiential learning program of The Learning Exchange. This program prepares teachers of third and fourth graders to implement a four- to six-week environmental science curriculum that is aligned to Kansas and Missouri state curriculum standards in science, math and communication arts and / or writing. Students explore five Midwestern habitats during a five-hour experience in the 35,000 sq. ft. underground learning laboratory at Hunt Midwest Subtropolis. Each habitat puts a team of students to the test with a simulated natural event—a flood, wildfire, algae bloom or drought — challenging students to work together to restore the habitat to life-sustaining levels. Curriculum includes teacher and volunteer training sessions and materials; classroom instructional materials for students and teachers; materials for use during the on-site visit to EarthWorks; and phone consultation to assist with program implementation. Parents of students with special needs are encouraged to participate in training prior to the on site visit.

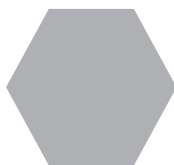

Parents can volunteer for the day students visit. Volunteers willing to help in the office are also welcome.

 Master Gardeners is a program of the Kansas and Missouri state university outreach and extension offices. Master Gardeners are volunteers who undergo extensive training and are under the supervision of county extension agents. They provide gardening information to the public through plant clinics, classes, workshops, etc., that are specific to each area. The Master Gardeners of Greater Kansas City represent Master Gardeners from Jackson, Clay, Platte and Cass counties. Master Gardeners have several projects geared toward children.

    Volunteers are trained to be Master Gardeners. They require 20 hours of volunteer service per year for active membership.
