## INTRODUCTION

The United States Environmental Protection Agency (EPA), in partnership with the States

---

<sup>1</sup>The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

---

## **RCRA HAZARDOUS WASTE GENERATION**

RCRA hazardous waste generation information is obtained from data reported by RCRA large quantity generators (LQGs). A generator is defined as a Federal large quantity generator if:

- the generator generated in any single month 1,000 kg (2,200 pounds or 1.1 tons) or more of RCRA hazardous waste; or
- the generator generated in any single month, or accumulated at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or
- the generator generated, or accumulated at any time, more than 100 kg (220 pounds) of spill cleanup material contaminated with RCRA acute hazardous waste.

All facilities that were LQGs in 2003 are required to provide EPA with 2003 waste generation and management information. It is important to note that the generators identified in this Report have been included based on the most current information made available to EPA by the States. However, the generator counts may include some generators that, when determining whether they were LQGs, used a lower State-defined threshold for LQGs, counted wastes regulated only by their States, or counted wastes exempt from Federal regulation. Hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities in this Report.

## **RCRA HAZARDOUS WASTE MANAGEMENT**

RCRA hazardous waste management information is obtained from data reported by facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. Only wastes that were treated or disposed of in 2003 are included in the management quantities in this Report. Hazardous wastes that are stored, bulked and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site, are excluded from the management quantities in this Report.

## **RCRA HAZARDOUS WASTE SHIPMENTS AND RECEIPTS**

RCRA hazardous waste shipment information is obtained from data reported by both RCRA LQGs and facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. RCRA hazardous waste receipt information is obtained from data reported by facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. All reported shipments identified by the State, or implementing EPA office, for inclusion in the National Biennial Report are included in the waste shipment quantities in this Report, even if the waste was shipped to a transfer facility. In some instances, waste is transferred within a physical location that has more than one EPA Identification Number. These waste transfers are treated as shipments.

RCRA hazardous waste interstate shipment quantities include wastes generated in one State and shipped to a receiver in a different State, excluding shipments to a foreign country. Interstate shipments are calculated from information provided by waste shippers. RCRA hazardous waste interstate receipts include all wastes received by a State which differs from the State of origin, excluding foreign imports. RCRA hazardous waste interstate receipts are calculated from information provided by the facilities that received the wastes.

## **THE DATA PRESENTED IN THIS NATIONAL BIENNIAL REPORT**

Beginning with the 2001 biennial reporting cycle, EPA changed the reporting requirements for RCRA hazardous wastes. EPA would like to caution all readers of this Report that the changes to these reporting requirements will cause cursory comparisons of the 2003 National Biennial Report data to National Reports prior to 2001 to be misleading.

Prior to the 2001 National Biennial Report, EPA excluded wastes with wastewater characteristics and wastes described by only State Hazardous Waste Codes. Beginning with the 2001 National Biennial Report and continuing with the 2003 National Biennial Report, it is the responsibility of individual States or implementing EPA offices to properly identify data that is to be included in or excluded from the National Biennial Report.

## National Biennial RCRA Hazardous Waste Report: Based on 2003 Data

---

For this 2003 National Biennial RCRA Hazardous Waste Report, EPA has included all data that was identified by the State or implementing EPA office for inclusion in the Report, with the following two (2) exceptions:

- 1) hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities; and
- 2) hazardous waste that is stored, bulked, and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site is excluded from management quantities.

In addition, Biennial Reports prior to 2001 only included management and receipts from permitted treatment, storage, and disposal facilities. The 2003 National Biennial Report includes management and receipts data from both permitted treatment, storage, and disposal facilities and generators that are not required to be permitted (e.g., those that recycle solvent hazardous waste generated on-site).

## EPA MANAGEMENT METHOD CODES

Code	Management Method Description	Code	Management Method Description
<b><u>RECLAMATION AND RECOVERY</u></b>			
<b>H010</b>	Metals recovery including retorting, smelting, chemical, etc.	<b>H082</b>	Adsorption (as the major component of treatment)
<b>H020</b>	Solvents recovery (distillation, extraction, etc.)	<b>H083</b>	Air or steam stripping (as the major component of treatment)
<b>H039</b>	Other recovery or reclamation for reuse including acid regeneration, organics recovery, etc. (specify in comments)	<b>H101</b>	Sludge treatment and/or dewatering (as the major component of treatment; not H071-H075, H077, or H082)
<b>H050</b>	Energy recovery at this site - used as fuel (includes on-site fuel blending before energy recovery)	<b>H103</b>	Absorption (as the major component of treatment)
<b>H061</b>	Fuel blending prior to energy recovery at another site (waste generated either onsite or received from offsite)	<b>H111</b>	Stabilization or chemical fixation prior to disposal at another site (as the major component of treatment; not H071-H075, H077, or H082)
<b><u>DESTRUCTION OR TREATMENT PRIOR TO DISPOSAL AT ANOTHER SITE</u></b>		<b>H112</b>	Macro-encapsulation prior to disposal at another site (as the major component of treatment; not H071-H075, H077, or H082)
<b>H040</b>	Incineration - thermal destruction other than use as a fuel (includes any preparation prior to burning)	<b>H121</b>	Neutralization only (no other treatment)
<b>H071</b>	Chemical reduction with or without precipitation (includes any preparation or final processes for consolidation of residuals)	<b>H122</b>	Evaporation (as the major component of treatment; not reportable as n ( Tw -3.61007 Tw T1Tj/Ta9g
<b>H073</b>	Cyanide destruction with or without precipitation (includes any preparation or final processes for consolidation of residuals)		
<b>H075</b>	Chemical oxidation (includes any preparation or final processes for consolidation of residuals)		
<b>H076</b>	Wet air oxidation (includes any preparation or final processes for consolidation of residuals)		
<b>H077</b>	Other chemical precipitation with or without pre-treatment (includes processes for consolidation of residuals)		
<b>H081</b>	Biological treatment with or without precipitation (includes any preparation or final processes for consolidation of residuals)		

## EPA MANAGEMENT METHOD CODES

Code	Management Method Description
<b>H135</b>	Discharge to sewer/POTW or NPDES (with prior storage - with or without treatment)
<b><u>TRANSFER OFFSITE</u></b>	
<b>H141</b>	The site receiving this waste stored/bulked and transported the waste with no treatment or recovery (H010-H129), fuel blending (H061), or disposal (H131-H135) at that receiving site.

Exhibits 2.5, 2.6, 2.7, 3.9, 3.10, and 3.11 present managed quantities grouped by management methods. The management method groupings used in these exhibits are defined as follows:

<b><u>Management Method Groups</u></b>	<b><u>Management Method Codes</u></b>
Aqueous Inorganic Treatment	H071, H073, H075, H076, H077
Aqueous Organic Treatment	H081, H082, H083
Deepwell or Underground Injection	H134
Energy Recovery	H050
Fuel Blending	H061
Incineration	H040
Land Treatment/Application/Farming	H131
Landfill/Surface Impoundment	H132
Metals Recovery	H010
Other Disposal	H135, H139
Other Recovery	H039
Other Treatment	H121, H122, H123, H124, H129
Sludge Treatment	H101, H103
Solvents Recovery	H020
Stabilization	H111, H112
Storage and/or Transfer	H141

## **APPENDIX C**

### **2003 HAZARDOUS WASTE REPORT FORM CODES**

**This page intentionally left blank.**

---

---

---

Ash (from any type of burning of hazardous waste)

Slags, drosses, and other solid thermal residues

Metal scale, filings and scrap (including metal drums)

Cyanide or metal cyanide bearing solids, salts or chemicals

Metal salts or chemicals not containing cyanides

Other inorganic solids (specify in comments)

Lime and/or metal hydroxide sludges and solids with no cyanides (not contaminated muds - W512)

Gypsum sludges from wastewater treatment or air pollution control

Other sludges from wastewater treatment or air pollution control

Metal bearing sludges (including plating sludge) not containing cyanides

Cyanide-bearing sludges (not contaminated soils - W512)

Other inorganic sludges (not contaminated muds - W512; specify in comments)

Pesticide solids (used or discarded - not contaminated soils - W301)

Solid resins, plastics or polymerized organics

Explosives or reactive organic solids

Other organic solids (specify in comments)

Oily sludge (not contaminated muds - W512)

Paint or ink sludges, still bottoms in sludge form (not contaminated muds - W512)

Resins, tars, polymer or tarry sludge (not contaminated muds - W512)

Other organic sludge (specify in comments)

**EPA HAZARDOUS WASTE CODES**

<b>Code</b>	<b>Waste description</b>	<b>Code</b>	<b>Waste description</b>
<b>F034</b>	Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.		physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated in aggressive biological treatment units as defined in Section 261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), and F037, K048, and K051 wastes are exempted from this listing.
<b>F035</b>	Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	<b>F039</b>	Leachate resulting from the treatment, storage, or disposal of wastes classified by more than one waste code under Subpart D, or from a mixture of wastes classified under Subparts C and D of this part. (Leachate resulting from the management of one or more of the following EPA Hazardous Wastes and no other hazardous wastes retains its hazardous waste code(s): F020, F021, F022, F023, F026, F027, and/or F028.)
<b>F037</b>	Petroleum refinery primary oil/water/solids separation sludge - Any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and stormwater units receiving dry weather flow, sludge generated in stormwater units that do not receive dry weather flow, sludges generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units as defined in §261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing. This listing does include residuals generated from processing or recycling oil-bearing hazardous secondary materials excluded under §261.4(a)(12)(i), if those residuals are to be disposed of.		
<b>F038</b>	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge - Any sludge and/or float generated from the		
		<b>HAZARDOUS WASTE FROM SPECIFIC SOURCES</b> (SEE 40 CFR 261.32)	
		<b>K001</b>	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.
		<b>K002</b>	Wastewater treatment sludge from the production of chrome yellow and orange pigments.
		<b>K003</b>	Wastewater treatment sludge from the production of molybdate orange pigments.
		<b>K004</b>	Wastewater treatment sludge from the production of zinc yellow pigments.
		<b>K005</b>	Wastewater treatment sludge from the production of chrome green pigments.
		<b>K006</b>	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).

## EPA HAZARDOUS WASTE CODES

Code	Waste description	Code	Waste description
<b>K007</b>	Wastewater treatment sludge from the production of iron blue pigments.	<b>K025</b>	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.
<b>K008</b>	Oven residue from the production of chrome oxide green pigments.	<b>K026</b>	Stripping still tails from the production of methyl ethyl pyridines.
<b>K009</b>	Distillation bottoms from the production of acetaldehyde from ethylene.	<b>K027</b>	Centrifuge and distillation residues from toluene diisocyanate production.
<b>K010</b>	Distillation side cuts from the production of acetaldehyde from ethylene.	<b>K028</b>	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.
<b>K011</b>	Bottom stream from the wastewater stripper in the production of acrylonitrile.	<b>K029</b>	Waste from the product steam stripper in the production of 1,1,1-trichloroethane.
<b>K013</b>	Bottom stream from the acetonitrile column in the production of acrylonitrile.	<b>K030</b>	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.
<b>K014</b>	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	<b>K031</b>	By-product salts generated in the production of MSMA and cacodylic acid.
<b>K015</b>	Still bottoms from the distillation of benzyl chloride.	<b>K032</b>	Wastewater treatment sludge from the production of chlordane.
<b>K016</b>	Heavy ends or distillation residues from the production of carbon tetrachloride.	<b>K033</b>	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.
<b>K017</b>	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	<b>K034</b>	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.
<b>K018</b>	Heavy ends from the fractionation column in ethyl chloride production.	<b>K035</b>	Wastewater treatment sludges generated in the production of creosote.
<b>K019</b>	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	<b>K036</b>	Still bottoms from toluene reclamation distillation in the production of disulfoton.
<b>K020</b>	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	<b>K037</b>	Wastewater treatment sludges from the production of disulfoton.
<b>K021</b>	Aqueous spent antimony catalyst waste from fluoromethane production.	<b>K038</b>	Wastewater from the washing and stripping of phorate production.
<b>K022</b>	Distillation bottom tars from the production of phenol/acetone from cumene.	<b>K039</b>	Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.
<b>K023</b>	Distillation light ends from the production of phthalic anhydride from naphthalene.	<b>K040</b>	Wastewater treatment sludge from the production of phorate.
<b>K024</b>	Distillation bottoms from the production of phthalic anhydride from naphthalene.	<b>K041</b>	Wastewater treatment sludge from the production of toxaphene.

## EPA HAZARDOUS WASTE CODES

Code	Waste description	Code	Waste description
<b>K097</b>	Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.	<b>K110</b>	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine from carboxylic acid hydrazides.
<b>K098</b>	Untreated process wastewater from the production of toxaphene.	<b>K111</b>	Product washwaters from the production of dinitrotoluene via nitration of toluene.
<b>K099</b>	Untreated wastewater from the production of 2,4-D.	<b>K112</b>	Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.
<b>K100</b>	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.	<b>K113</b>	Condensed liquid light ends from purification of toluenediamine in production of toluenediamine via hydrogenation of dinitrotoluene.
<b>K101</b>	Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	<b>K114</b>	Vicinals from the purification of toluenediamine in production of toluenediamine via hydrogenation of dinitrotoluene.
<b>K102</b>	Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	<b>K115</b>	Heavy ends from purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.
<b>K103</b>	Process residues from aniline extraction from the production of aniline.	<b>K116</b>	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.
<b>K104</b>	Combined wastewaters generated from nitrobenzene/aniline production.	<b>K117</b>	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.
<b>K105</b>	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	<b>K118</b>	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.
<b>K106</b>	Wastewater treatment sludge from the mercury cell process in chlorine production.	<b>K123</b>	Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.
<b>K107</b>	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	<b>K124</b>	Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.
<b>K108</b>	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine from carboxylic acid hydrazides.	<b>K125</b>	Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.
<b>K109</b>	Spent filter cartridges from product purification from the product of 1,1-dimethylhydrazine from carboxylic acid hydrazides.	<b>K126</b>	Baghouse dust and floor sweepings in milling and packaging operations from production or formulation of ethylenebisdithiocarbamic acid and its salts.

**This page intentionally left blank.**

## STATE GUIDANCE

The Environmental Protection Agency, Office of Solid Waste provides guidance to the implementers (States and Regions) to determine which reported waste should be included in the National Hazardous Waste Biennial Report (NBR). It is the responsibility of each implementer to determine which sites and wastes should be included in the NBR. Implementers indicate which sites and wastes are to be included in the NBR by setting "include in national report" flags. These flags exist at both the site level and waste level. Implementers may submit sites and waste streams that are not included in the NBR. An implementer's complete submission, regardless of whether the site and/or waste stream is marked for inclusion in the NBR, is stored in RCRAInfo.

A site should be included in the NBR if that site was a Large Quantity Generator (based on the federal definition) or a Treatment, Storage or Disposal Facility (TSDF) in calendar year 2003, regardless of the site's current generator and/or TSDF status. The Site ID Form generator status boxes (Item 10.A.1.a, b, or c) and TSDF status box (Item 10.A.3) indicate the site's generator status and TSDF status on the date that the biennial report submission was certified (Item 13). It is possible that a site's generator and/or TSDF status was different in calendar year 2003 than it was at the time of the biennial report submission certification.

Once a site is determined to meet the criteria for inclusion in the NBR, each waste stream reported by that site should be reviewed to determine whether that waste should be included in the NBR. Items to review include: 1) foreign exports, 2) on-site management without a RCRA permit, and 3) wastewaters.

The *2003 Hazardous Waste Report Instructions and Forms* says "RCRA hazardous wastes exported directly to a foreign country **should not be reported** on Form GM. Rather, hazardous waste exports should be reported on the Annual Report required under 40 CFR 262.56." Some implementers require reporting of wastes exported to foreign countries. In these cases, waste shipped off-site to foreign countries should be marked for inclusion in the NBR.

Treatment, storage and disposal activities generally require a federal RCRA permit allowing a site to conduct various TSD activities. However, there are treatment and recycling activities that do not require a RCRA permit. Regardless of whether the TSD activity requires a RCRA permit or not, the management of this waste should be included in the NBR.

In general, wastewaters should be excluded from the NBR. Characteristics that often identify wastewaters include the following form codes and/or management methods.

### Form Codes:

- W101 Very dilute aqueous waste containing more than 99% water
- W105 Acidic aqueous wastes less than 5% acid
- W113 Other aqueous waste or wastewaters

### Management Methods:

- H071 Chemical reduction with or without precipitation
- H073 Cyanide destruction with or without precipitation
- H075 Chemical oxidation
- H076 Wet air oxidation
- H077 Other chemical precipitation with or without pre-treatment
- H081 Biological treatment with or without precipitation

## INTRODUCTION

The United States Environmental Protection Agency (EPA), in partnership with the States

---

<sup>1</sup>The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

---

## RCRA HAZARDOUS WASTE GENERATION

RCRA hazardous waste generation information is obtained from data reported by RCRA large quantity generators (LQGs). A generator is defined as a Federal large quantity generator if:

- the generator generated in any single month 1,000 kg (2,200 pounds or 1.1 tons) or more of RCRA hazardous waste; or
- the generator generated in any single month, or accumulated at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or
- the generator generated, or accumulated at any time, more than 100 kg (220 pounds) of spill cleanup material contaminated with RCRA acute hazardous waste.

All facilities that were LQGs in 2003 are required to provide EPA with 2003 waste generation and management information. It is important to note that the generators identified in this Report have been included based on the most current information made available to EPA by the States. However, the generator counts may include some generators that, when determining whether they were LQGs, used a lower State-defined threshold for LQGs, counted wastes regulated only by their States, or counted wastes exempt from Federal regulation. Hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities in this Report.

## RCRA HAZARDOUS WASTE MANAGEMENT

RCRA hazardous waste management information is obtained from data reported by facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. Only wastes that were treated or disposed of in 2003 are included in the management quantities in this Report. Hazardous wastes that are stored, bulked and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site, are excluded from the management quantities in this Report.

## **RCRA HAZARDOUS WASTE SHIPMENTS AND RECEIPTS**

RCRA hazardous waste shipment information is obtained from data reported by both RCRA LQGs and facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. RCRA hazardous waste receipt information is obtained from data reported by facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. All reported shipments identified by the State, or implementing EPA office, for inclusion in the National Biennial Report are included in the waste shipment quantities in this Report, even if the waste was shipped to a transfer facility. In some instances, waste is transferred within a physical location that has more than one EPA Identification Number. These waste transfers are treated as shipments.

RCRA hazardous waste interstate shipment quantities include wastes generated in one State and shipped to a receiver in a different State, excluding shipments to a foreign country. Interstate shipments are calculated from information provided by waste shippers. RCRA hazardous waste interstate receipts include all wastes received by a State which differs from the State of origin, excluding foreign imports. RCRA hazardous waste interstate receipts are calculated from information provided by the facilities that received the wastes.

## **THE DATA PRESENTED IN THIS NATIONAL BIENNIAL REPORT**

Beginning with the 2001 biennial reporting cycle, EPA changed the reporting requirements for RCRA hazardous wastes. EPA would like to caution all readers of this Report that the changes to these reporting requirements will cause cursory comparisons of the 2003 National Biennial Report data to National Reports prior to 2001 to be misleading.

Prior to the 2001 National Biennial Report, EPA excluded wastes with wastewater characteristics and wastes described by only State Hazardous Waste Codes. Beginning with the 2001 National Biennial Report and continuing with the 2003 National Biennial Report, it is the responsibility of individual States or implementing EPA offices to properly identify data that is to be included in or excluded from the National Biennial Report.

## National Biennial RCRA Hazardous Waste Report: Based on 2003 Data

---

For this 2003 National Biennial RCRA Hazardous Waste Report, EPA has included all data that was identified by the State or implementing EPA office for inclusion in the Report, with the following two (2) exceptions:

- 1) hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities; and
- 2) hazardous waste that is stored, bulked, and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site is excluded from management quantities.

In addition, Biennial Reports prior to 2001 only included management and receipts from permitted treatment, storage, and disposal facilities. The 2003 National Biennial Report includes management and receipts data from both permitted treatment, storage, and disposal facilities and generators that are not required to be permitted (e.g., those that recycle solvent hazardous waste generated on-site).

Mixtures with ignitable, corrosive, reactive, D004-17, and D018-43 characteristic codes may also contain other characteristic waste codes. Similarly, wastes with F, K, P, and U listed codes may have other listed waste codes.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity generated.

Note: Columns may not sum to total due to rounding.

Number of Facilities column may not sum to total because facilities may have multiple handling methods.  
Facilities reporting storage only and their quantity managed are excluded.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity managed.

**Reporting requirement changes for the 2003 National Biennial Report will make cursory comparisons of the 2003 National Biennial Report to National Biennial Reports developed prior to 2001 misleading. Refer to the Introduction for a complete explanation.**

Note: Columns may not sum to total due to rounding.

Number of Facilities column may not sum to total because facilities may have multiple handling methods. Facilities reporting storage only and their quantity managed are excluded.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity managed.

**Reporting requirement changes for the 2003 National Biennial Report will make cursory comparisons of the 2003 National Biennial Report to National Biennial Reports developed prior to 2001 misleading. Refer to the Introduction for a complete explanation.**

---

138,837 Tons

40,090 Tons

The State to which Kentucky shipped the largest quantity of waste was Illinois (29,267 tons).

The State that shipped the largest quantity of waste to Kentucky was Texas (3,849 tons).

Column may not sum to total due to rounding.  
State may have fewer than fifty facilities that received waste.

---

39,474 Tons

162,049 Tons

The State to which Minnesota shipped the largest quantity of waste was Illinois (20,491 tons).

The State that shipped the largest quantity of waste to Minnesota was Illinois (70,727 tons).

Note: Columns may not sum to total because a waste code may apply to more than one waste. Mixtures with ignitable, corrosive, reactive, D004-17, and D018-43 characteristic codes may also contain other characteristic waste codes. Similarly, wastes with F, K, P, and U listed codes may have other listed waste codes.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity generated.

400,885 Tons

169,033 Tons

The State to which New Jersey shipped the largest quantity of waste was Michigan (133,653 tons).

The State that shipped the largest quantity of waste to New Jersey was Pennsylvania (44,261 tons).

ONLY IGNITABLE	69	ONLY AN F CODE	33
ONLY CORROSIVE	162	ONLY A K CODE	403
ONLY REACTIVE	104	ONLY A P CODE	0
ONLY D004-17	459	ONLY A U CODE	1
ONLY D018-43	721,869		
HAS MORE THAN ONE CHARACTERISTIC CODE	2,255	HAS MORE THAN ONE LISTED CODE	525

HAS IGNITABLE CODE	168	IGN. W/ AT LEAST 1 LSTD	991
HAS CORROSIVE CODE	64	CORR. W/ AT LEAST 1 LSTD	36
HAS REACTIVE CODE	26	REACT. W/ AT LEAST 1 LSTD	40
HAS D004-D017 CODE	2,143	D004-17 W/ AT LEAST 1 LSTD	441
HAS D018-D043 CODE	2,163	D018-43 W/ AT LEAST 1 LSTD	436

HAS REACTIVE CODE	339		REACT. W/ AT LEAST 1 LSTD	23	
HAS D004-D017 CODE	586		D004-17 W/ AT LEAST 1 LSTD	147	
HAS D018-D043 CODE	388		D018-43 W/ AT LEAST 1 LSTD	167	
		HAS AN F CODE	1,109	F WASTE W/ AT LEAST 1 CHAR	243
		HAS A K CODE	1,109	K WASTE W/ AT LEAST 1 CHAR	0
		HAS A P CODE	0	P WASTE W/ AT LEAST 1 CHAR	0
		HAS A U CODE	0	U WASTE W/ AT LEAST 1 CHAR	2

Note: Columns may not sum to total because a waste code may apply to more than one waste. Mixtures with ignitable, corrosive, reactive, D004-17, and D018-43 characteristic codes may also contain other characteristic waste codes. Similarly, wastes with F, K, P, and U listed codes may have other listed waste codes.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity generated.

- 3241 Petroleum and Coal Products Manufacturing
- 5621 Waste Collection
- 4249 Miscellaneous Nondurable Goods Merchant Wholesalers
- 5622 Waste Treatment and Disposal
- 3328 Coating, Engraving, Heat Treating, and Allied Activities
- 3364 Aerospace Product and Parts Manufacturing
- 3261 Plastics Product Manufacturing
- 3323 Architectural and Structural Metals Manufacturing
- 2212
- 6113

Note: Columns may not sum to total due to rounding.

Number of Facilities column may not sum to total because facilities may have multiple handling methods.  
Facilities reporting storage only and their quantity managed are excluded.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity managed.

**Reporting requirement changes for the 2003 National Biennial Report will make cursory comparisons of the 2003 National Biennial Report to National Biennial Reports developed prior to 2001 misleading. Refer to the Introduction for a complete explanation.**

HAS D018-D043 CODE	3		D018-43 W/ AT LEAST 1 LSTD	0	
		HAS AN F CODE	0	F WASTE W/ AT LEAST 1 CHAR	0
		HAS A K CODE	0	K WASTE W/ AT LEAST 1 CHAR	0
		HAS A P CODE	0	P WASTE W/ AT LEAST 1 CHAR	0
		HAS A U CODE	0	U WASTE W/ AT LEAST 1 CHAR	0

Note: Columns may not sum to total because a waste code may apply to more than one waste. Mixtures with ignitable, corrosive, reactive, D004-17, and D018-43 characteristic codes may also contain other characteristic waste codes. Similarly, wastes with F, K, P, and U listed codes may have other listed waste codes.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity generated.

Note: Columns may not sum to total due to rounding.

Number of Facilities column may not sum to total because facilities may have multiple handling methods. Facilities reporting storage only and their quantity managed are excluded.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity managed.

**Reporting requirement changes for the 2003 National Biennial Report will make cursory comparisons of the 2003 National Biennial Report to National Biennial Reports developed prior to 2001 misleading. Refer to the Introduction for a complete explanation.**

Note: Columns may not sum to total because a waste code may apply to more than one waste. Mixtures with ignitable, corrosive, reactive, D004-17, and D018-43 characteristic codes may also contain other characteristic waste codes. Similarly, wastes with F, K, P, and U listed codes may have other listed waste codes.

\*Based on the Federal hazardous waste codes most frequently reported, not the quantity generated.

## INTRODUCTION

The United States Environmental Protection Agency (EPA), in partnership with the States<sup>1</sup>, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of *The National Biennial RCRA Hazardous Waste Report (Based on 2003 Data)* is to communicate the findings of EPA's 2003 hazardous waste reporting data collection efforts to the public, government agencies, and the regulated community. The Report consists of three volumes of data:

- The **National Analysis** data presents a detailed look at waste-handling practices in the States, and largest facilities nationally, including (1) the quantity of waste generated, managed, shipped, and received, and interstate shipments and receipts, and (2) the number of generators and managing facilities,
- The **State Detail Analysis** data is a detailed look at each State's waste handling practices, including overall totals for generation, management, shipments, and receipts, as well as totals for the largest fifty facilities, and
- The **List of Reported RCRA Sites** identifies every hazardous waste facility in the United States that submitted a hazardous waste report in 2003.

## RCRA HAZARDOUS WASTE

Throughout this Report, the term RCRA hazardous waste refers to solid waste assigned a Federal Hazardous Waste Code and regulated by RCRA. Some States elect to regulate wastes not specifically regulated by EPA; these wastes are assigned State Hazardous Waste Codes. For this Report EPA asked States to exclude data for waste with only State Hazardous Waste Codes (the waste description does not include any Federal Hazardous Waste Codes). The reader can find a more detailed explanation in the *RCRA Orientation Manual* (<http://www.epa.gov/epaoswer/general/orientat/>) and in the Code of Federal Regulations in 40 CFR Parts 260 and 261. Please refer to Appendix D of this Report for a complete list of EPA Hazardous Waste Codes used by the regulated community for their 2003 Biennial Report submissions. Details about the information submitted by the regulated community can be found in the *2003 Hazardous Waste Report Instructions and Forms* (<http://www.epa.gov/epaoswer/hazwaste/data/br03/forms.htm>). Guidance provided to the regulated community regarding information to include or exclude from the National report can be found in Appendix E.

---

<sup>1</sup>The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

---

## **RCRA HAZARDOUS WASTE GENERATION**

RCRA hazardous waste generation information is obtained from data reported by RCRA large quantity generators (LQGs). A generator is defined as a Federal large quantity generator if:

- the generator generated in any single month 1,000 kg (2,200 pounds or 1.1 tons) or more of RCRA hazardous waste; or
- the generator generated in any single month, or accumulated at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or
- the generator generated, or accumulated at any time, more than 100 kg (220 pounds) of spill cleanup material contaminated with RCRA acute hazardous waste.

All facilities that were LQGs in 2003 are required to provide EPA with 2003 waste generation and management information. It is important to note that the generators identified in this Report have been included based on the most current information made available to EPA by the States. However, the generator counts may include some generators that, when determining whether they were LQGs, used a lower State-defined threshold for LQGs, counted wastes regulated only by their States, or counted wastes exempt from Federal regulation. Hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities in this Report.

## **RCRA HAZARDOUS WASTE MANAGEMENT**

RCRA hazardous waste management information is obtained from data reported by facilities that treated, stored, or disposed of RCRA hazardous wastes on site during 2003. Only wastes that were treated or disposed of in 2003 are included in the management quantities in this Report. Hazardous wastes that are stored, bulked and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site, are excluded from the management quantities in this Report.

## National Biennial RCRA Hazardous Waste Report: Based on 2003 Data

---

For this 2003 National Biennial RCRA Hazardous Waste Report, EPA has included all data that was identified by the State or implementing EPA office for inclusion in the Report, with the following two (2) exceptions:

- 1) hazardous waste received from off site for storage/bulking and subsequently transferred off site for treatment or disposal is excluded from generation quantities; and
- 2) hazardous waste that is stored, bulked, and/or transferred off site with no prior treatment/recovery, fuel blending, or disposal at the site is excluded from management quantities.

In addition, Biennial Reports prior to 2001 only included management and receipts from permitted treatment, storage, and disposal facilities. The 2003 National Biennial Report includes management and receipts data from both permitted treatment, storage, and disposal facilities and generators that are not required to be permitted (e.g., those that recycle solvent hazardous waste generated on-site).
